

Horticide™

For Complete Horticulture Biosecurity

Horticide™ is an independently tested and approved disinfectant for sterilising horticultural and fruit growing buildings, glasshouses, equipment and transport containers. Horticide™ is currently used in greenhouses that grow tomatoes, cucumbers, mushrooms and many other fruit and vegetables.

Horticide™ is a powerful broad spectrum disinfectant for applying to all surfaces and equipment. It can be applied by a coarse spray through a washer at low pressure or knapsack sprayer.

It is important to clean and disinfect green houses between crops to minimise the risk of cross contamination from crop to crop. All plants, compost and movable equipment should be removed. Water pipes including hoses should be drained and disinfected before re use to remove all biofilms.

Advantages of Horticide™ include:

- Broad spectrum disinfectant
- Tested against many plant disorders including PSVd, pepino mosaic virus, verticillium disorders and pseudomonas
- Environmentally friendly
- No re-entry restrictions for hard surface use
- Cost-effective use rates
- Good wetting agent
- Long residual action
- Biodegradable

Applications include:

- Hard surfaces/exterior
- Work areas and benches, pots, trays, matting and flower buckets
- Disinfection of cutting tools
- Glasshouses and polytunnels

Horticide™

For Complete Horticulture Biosecurity

Clean all surfaces with Omniclean™ at a dilution of 1:50 for foam or 1:160 for non-foam application and removal of green algae off glass. Rinse with clean water and allow to dry.

Apply Horticide™ at a dilution of 1:100 to all clean dry surfaces and allow to dry.

Fumigation – dilute Horticide™ at 1:4 for thermal fogging and apply at 9 litres per 1,000m³.

Cold fogging/misting dilute at 1:9 apply at 9 litres per 1,000 m².

Dipping tanks for equipment dilute Horticide™ at 1:100. Immerse equipment for 30 minutes. Remove and allow to dry naturally.

Knives and pruning equipment dip in a solution diluted 1:50.

Water/Sprayer lines. Drain system and refill with a dilution of Horticide™ at 1:100 and allow to stand for 3 hours. Drain and flush with clean water.

Foot baths – dilute Horticide™ at 1:100. Replace every 2-3 days or extra if needed.

Store sealed in original container out of direct sunlight
Keep away from Children
Dispose of empty containers according to local requirements
For professional use only
Always refer to the manufacturers msds

Shelf-life – 3 years from DOM

Presentations
5l, 25l, 200l
